Finish Better

COMPOSITE FINISHING

FS Trimming Carbides

Precision-engineered burs used for trimming facial surfaces of composite filling materials and for efficient adhesive removal in orthodontic debonding procedures.

Advantages:

- Has non-cutting tips to minimize tissue impingement and trauma
- Leaves a pre-polish finish
- Reduces chair time

Q-Finishers

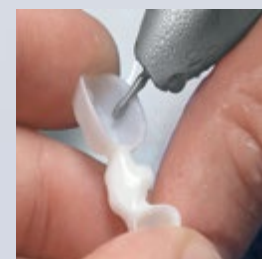

Developed with an innovative cutting design, Q-Finishers allow you to finish composite restorations in just two steps. Additionally, the pressure-sensitive design allows for safe and efficient removal of adhesives in Orthodontic debonding procedures.

Advantages:

- Time-saving (fewer burs required)
- Special cross-cut flute design that effectively removes, adjusts and polishes all composite restorations. This kit provides a complete solution for a beautiful finish

ZR Diamonds

ZR Diamonds offer versatility, durability and performance when needing quick, efficient material reduction of E.max® and zirconia restorations.

Advantages:

- Has diamond particles permanently bonded in a dense, packed layer to provide durability
- No additional pressure is required during recontouring
- Extensive range of shapes and sizes to meet all needs

Polish Best

COMPOSITE POLISHING

Compobrite Polisher Kit

TD2948A

Specially bonded, interspersed diamond grit working parts available in four shapes and optimized for two-step polishing.

Diamond Composite Polisher Kit

4527A

Our original two-step polishing system features diamond interspersed composite polishers that come in points, cups and discs.

ALL-CERAMIC POLISHING

LD/ZR Intra-Oral Adjustment Kit

LD0707A

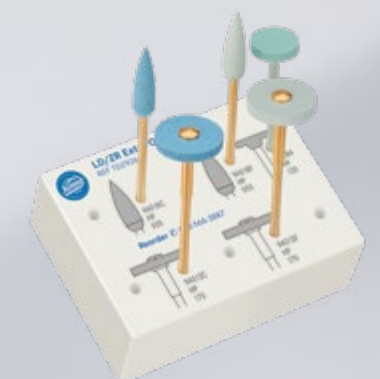

Newly-enhanced kit with popular favorites that effectively remove, adjust and polish all-ceramic restorations. This kit provides a complete solution for a beautiful finish.

LD/ZR Extra-Oral Adjustment Kit

TD2926

Extra-oral kit of diamond interspersed abrasive instruments for chairside adjustment and polishing of E.max® and zirconia crowns.

NEW Komet Sealers

KometBioSeal

KometBioSeal is a newly formulated, pre-mixed and 100% resin-free bioceramic root canal sealer.

Advantages:

- Suitable for warm or cold obturation techniques
- Shown to be antimicrobial in-vitro
- 10% larger tubes (2.2g vs. 2.0g)
- 40% more efficient, pre-bendable min-waste tips

KometSeal

A resin-based root canal sealer that is non-staining and an easy-to-mix paste.

Advantages:

- Excellent radiopacity for a clear view of the completed treatment
- Insoluble in tissue fluids
- Superior hermetic sealing capabilities
